# enjerneering
UI Builder

Pierson, Jake, Jadi, Payton

Project Overview

- ● Drag and drop website builder aimed at freelancers

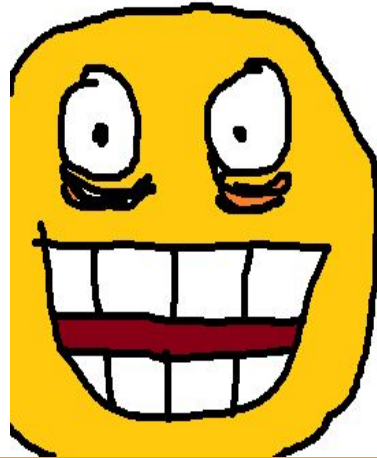

Payton

Demonstration

Something Interesting...

How are YOU feeling now that Iteration 2 is over?

1   2   3   4

Client and Mentor Feedback

- **Evan (Mentor)**
  - "You have a good foundation for this project, I think that iteration 3 will go smoothly for you guys."
  - "Turning on the drag-and-drop components this iteration will make it much easier to turn on more next iteration. Good job guys."
- **Jerrod (Client)**
  - "I like that you guys added the WebInfoViewer and turned on some other drag-and-drop features. And implemented a testing framework on top of that."
  - Recommended looking into Playwright, a testing framework

Third Iteration Features

Draft
Create an empty React program with all required components

Draft
When the "Publish" button is clicked, a JSON file will be created using data from Supabase and pushed to GitHub.

Draft
Store the JSON file within the GitHub project to be used by React components.

Draft
Set up a script for GitHub to automatically publish the project to Vercel using GitHub Actions.

Draft
Publish the empty React program to users.

Draft
Enable the ability to turn on deleted projects within the workspace.
